**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-9, drawn to a composite sensor device including an angular velocity sensor and an acceleration sensor, classified in class 73, subclass 510.
  - II. Claims 10-17, drawn to a method of producing a composite sensor device, classified in class 29, subclass 592.1.
2. The inventions are distinct, each from the other because of the following reasons:
3. Inventions I and II are related as product made and process of making. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the process as claimed can be used to make a materially different product such as a flow rate sensor, a density sensor or a pressure sensor.
4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the

search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
